Splash Sync for Magento 1

Welcome to the Magento 1 Module's Documentation!

This module implement Splash Sync connector for Magento 1. It provide access to multiples Objects for automated synchronization through Splash Sync dedicated protocol.

Summary

This documentation will focus on:

- [Features & Benefits](#)
- [Module Installation](#)
- [Module Configuration](#)

More about Splash

This module is part of [SplashSync](#) project.

For more informations about Splash Sync, the way it works and how you can use it to connect your applications, please refer our [online documentation](#).

Contributing

Any Pull requests are welcome!

This module is part of [SplashSync](#) project.

Key features & benefits

With Magento Commerce, you're supported by a global ecosystem of merchants, partners, and developers, who will bring your commerce vision to life. It's time to innovate, scale, and achieve extraordinary growth.

Splash Plugin for Magento 1 provide access to Customers, Products, Orders & Invoices Data.

Magento - Share your key E-Commerce data across all your apps

This module was designed to share your financial informations with all your business organization.

Your Magento website will become one of your "sales channels".

By using Splash for exporting and synchronizing all your sales informations, you can access all you sales in a single place.

Synchronize Products Stocks

Products stocks are critical for your business! Avoid errors by synchronizing your stocks easily across all your applications.

Merge all your customers data

Once all your modules connected, use the Object Linked to identify and merge all your customers profiles into a single Splash entity.

This way, all similar informations will be shared and synchronized anywhere, from CRM, ERP, to E-Commerce.

Consolidate & Simplify your Financial Analytics

Orders and invoices will be automatically exported from Magento to any other applications you may connect!

Your financial analytics is easier... and with no efforts.

You uses Magento as main database?

Magento module is ready to import Customers and Orders data form any other E-Commerce (i.e Prestashop or Wordpress).

This will be done by creating dedicated website on Magento, that will collect all incoming Customer & Orders.

Installation

- Download latest stable version here : [Splash Modules](#)
- Copy all module files on your Magento app folder (app/*)
- Enable & Configure the module

Requirements

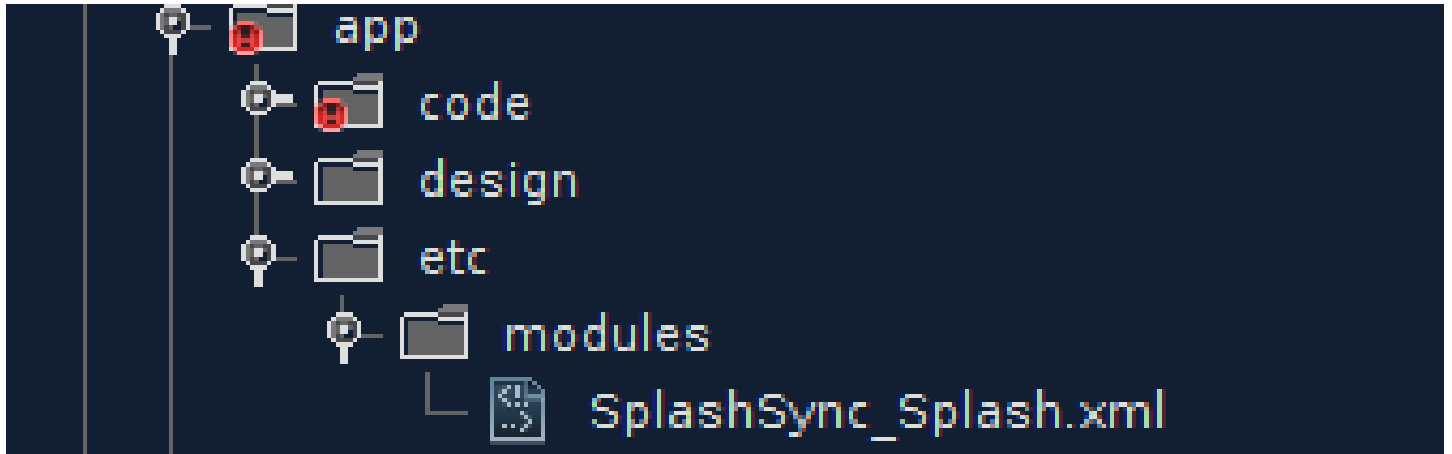

- PHP 5.6+ | PHP 7.0+
- Magento 1.7 | 1.8 | 1.9
- An active Splash Sync User Account

Configuration

Enable the Module

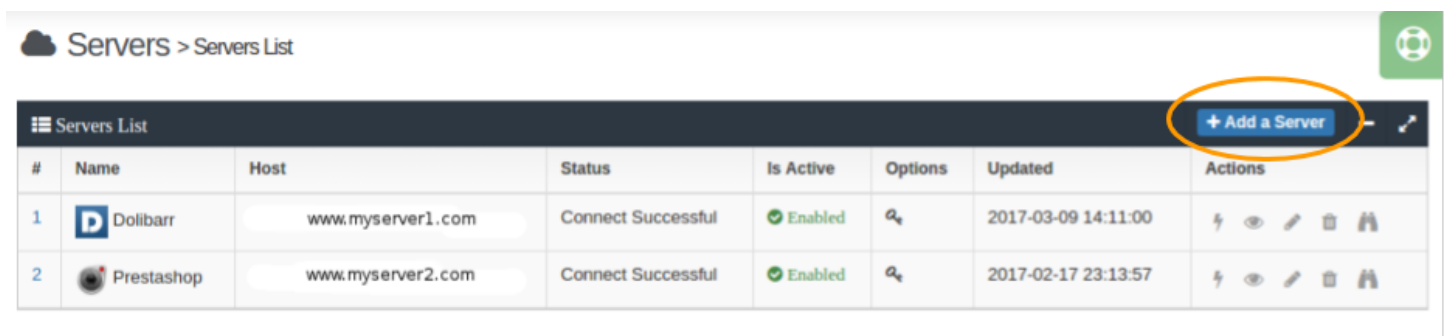

Splash Module should be automatically enabled when you copy files on Magento.

If it doesn't, follow these two steps: * Clear Magento cache from **System >> Cache Management** * Check Module declaration file is present on your server

Connect to your Splash Account

First, you need to create access keys for you module in our website. To do so, on Splash workspace, go to **Servers >> Add a Server** and note your id & encryption keys.

Then, enter the keys on Plugin's configuration (take care not to forget any character).

Server Connection

Connection parameters for your module on Splash Server. Once you have created your account, declare a new server and enter your credentials here.

Server Identifier: [GLOBAL]
 ▲ The unique identifier given by Splash Server.

Encryption Key: [GLOBAL]
 ▲ The unique encryption key given by Splash Server.

Locale: [GLOBAL]
 ▲ Default Language used for Splash Server.

Setup default Parameters

To work correctly, this module need few parameters to be selected.

Default User

Select which user will be used for all actions executed by Splash Module. We highly recommend creation of a dedicated user for Splash. Be aware Splash Module will take care of Users rights policy, this user must have appropriated right on Prestashop.

Check results of Self-Tests

Each time you update your configuration, module will verify your parameters and ensure communication with Splash is working fine. Ensure all tests are passed... this is critical!

Informations

Available Objects	ThirdParty, Product, Post, Page, Order, Invoice,
Available Widgets	SelfTest
Splash Server Ping Test	Messages Local SelfTest Passed [SplashServer] Ping Successful. Hello Wordpress-4.7!! Remote Client Ping Passed (http://www.splashsync.local/ws/soap)
Splash Server Connect Test	Messages [SplashServer] Connection Successful. Hello Wordpress-4.7!!

ThirdParty

Magento 1 Customer Object

Canonical Type : ThirdParty

Access

Allow creation of new objects	Yes
Allow update of existing objects	Yes
Allow delete of existing objects	Yes

Default Configuration

Export new objects to this server	Yes
Export updates of existing objects to this server	Yes
Export deletion of existing objects to this server	Yes
Import new objects from server	Yes
Import updates of existing objects from server	Yes
Import deletion of existing objects from server	Yes

Fields
